Transitioning to a Green World of Possibilities

Career opportunities in the new green economy

“Transitioning to a Green World of Possibilities” is an engaging and highly interactive one day Forum designed to provide students with the basic knowledge, frameworks and motivation for making a transition to a more green and sustainable future in any field.

As part of the Forum students receive an online green career self-assessment that includes aspirations, interests, skills and capabilities. This is completed prior to the Forum.

Upon completion of the Forum, students will be able to:

1. understand key trends in sustainability and the emerging green economy;
2. explore what they can do in their career and as an individual to contribute to the transition to a more sustainable/green economy;
3. develop their knowledge in green industries relevant to their customized career path.

- Learn about sustainable careers in the green economy
- Learn how to become more marketable in a competitive labor market
- Become more resilient, motivated and knowledgeable about the changing world of work
- Interact with students from both FDU campuses as well as the College of St. Elizabeth and Drew University
- Breakfast and lunch provided
- Shuttle service available
- Pre-registration required
