Doris Drucker, MS'63 inventor, author as well as this year’s Female Entrepreneur Lecturer, will assert that many of her friends were startled by her decision to embark upon a business venture 20 years after most people settle into retirement.

She invented an electronic instrument that translates voice volume to warning lights on a console. The patented Visivox® system is used in college lecture halls, auditoriums and churches. Drucker is the widow of famed business writer and management consultant, Peter Drucker.

Drucker has a philosophy that is simply this: “Stay as active as you can and keep learning. Find something that engages you, and avoid sinking into the daily routine!”

The lecture will follow a 6 p.m. reception and the 6:30 p.m. presentation of the 2006 New Jersey Business Idea Competition Awards to New Jersey high school students.
