Green house is a “go.” Ed Lynch has an electrician and a plumber (value $15,000). This brings down the cost to something manageable. The job must be completed by June 30. We are starting the process to get the permits today. We authorized money for the architectural drawings. We’re thinking that the greenhouse subcommittee of this Committee would take responsibility for the greenhouse. Facilities will take responsibility for its upkeep. A cleaning service can clean the greenhouse. We will need someone to take responsibility for watering plants and for controlling the temperature and lighting. Perhaps a graduate assistant can be responsible for this. Alice can supervise the student. Another possibility is that it can come under a grounds keeper. Rich also suggested that the patio in front of the greenhouse be a gift from the senior class from next year.

Earth Day.

We will have 100 t-shirts (FDU goes green). We will give these to participants, people cleaning. We reviewed the organizations that will be there. Sylvia, Cynthia, Christine and Corinne will “man” our table. Christine will help putting up flyers. Cynthia will send a 250 word blurb to the Equinox to publicize the event.

Other Business

Joel Harmon said that we can have some money from a grant.
