### Course Title:
General Psychology II

### Term/Semester/Year:
Fall, 2010

### Course Catalog Number:
PSYC-1102

### Instructor:
John Santelli

### Course Description:
The continuing section of General Psychology, which includes:

- Understanding the history, growth, and role of psychology in the everyday lives of people and as a natural science.

- Showing how the conscious self develops as a function of genetically shaped sensory input and perceptions and is expressed via concepts and language.

- Continuing such understanding by elucidating the way memory is formed, accessed and expressed as a function of motivational and emotional forces.

- Exploring how this understanding can lead to more effective ways of coping with stress and dealing constructively with social conflict and faction.

### Prerequisites (If any):
Recommended: General Psychology I, PSYC-1101

### Goals and Objectives:
Increase understanding of how the conscious self develops as a function of genetically shaped sensory input and perceptions and is expressed via concepts and language. Continue such understanding by elucidating the way memory is formed, accessed and expressed as a function of motivational and emotional forces. Explore how this understanding can lead to more effective ways of coping with stress and dealing constructively with social conflict and faction.
